### TO OUR FRIENDS:

We take pleasure in presenting to you the New Edition of Ford's Seed List—our Catalogue—and we wish to thank you at this time for your orders during the past year.

Such liberal patronage must be deserved, and we want to assure you that at all times we are most cautious to ensure the highest quality of Ford's Seeds. As in the past, your orders shall always have our most careful attention. Your requests for prompt delivery of any items required urgently shall be taken care of immediately.

We shall appreciate your valued orders, whether large or small, with the assurance that you will receive Quality Seeds and Quick Service.

Faithfully yours,

A. FORD & CO.

General Manager: E. A. HOPSON, F.R.H.S.

Secretary: ALAN E. HOPSON.

### BUSINESS INFORMATION

**QUOTATIONS ARE WITHOUT ENGAGEMENT**, but where the price is mentioned on the order, we will refer back for confirmation if an increased rate has to be charged.. If we fail to do this, the goods can be returned if the price is not approved.

When we are unable to supply the exact variety ordered, we use our best judgment as to substituting other varieties. Any such substitutions are always made with a due regard to season, locality and other conditions so far as known to us.

The substituted varieties are sent for your approval, and while we hope, and feel sure you will agree to what we have done with a desire to serve your best interest, you are at liberty to send back any such goods, and we will promptly credit you with their value.

**WHEN TO ORDER:** Kindly place your general order as early in the Season as possible, so that when conditions are favourable, your seed will be on hand.

**METHOD OF ORDERING:** Name, Postal Address, Station and District, should be clearly set forth, and full forwarding instructions given, so that mistakes cannot arise. PLEASE USE OUR ORDER FORMS, which will be found at front and back of this book. Further supplies on application.

**TERMS:** Prices quoted are FREE ON RAILS, JOHANNESBURG, NETT CASH, or per S.A. Railways, C.O.D., or Postal C.O.D. Cash should accompany all orders unless arrangements have been made for the opening of a monthly account, in which case our terms are strictly thirty days' cash, and all railage must be paid by the purchaser. If GOODS ARE TO BE SENT TO SIDINGS, PLEASE INCLUDE COST OF RAILAGE, as same must be prepaid. Customers must clearly understand that we undertake no responsibility for the safe delivery of goods which are consigned by rail to SIDINGS where there is no Station Master.

**Five per cent. can be deducted on seeds priced in this book if cash is sent with order.**

**NOTE.** When insufficient Cash is sent, quantities will be reduced accordingly. Any excess payments will be returned with invoice.

Amounts up to 21/- kindly send by Postal Order.

**PLEASE ADD 6d. EXCHANGE TO COUNTRY CHEQUES.**

**GOODS BY POST:** Where it is desired that goods be forwarded by post a remittance must be sent to cover postage. Our Seeds are only bought from the World's most reliable Growers and Seedsmen, and, a large proportion being necessarily Imported, cannot be sent by Agricultural Post.

### SEEDS BY PARCEL POST

### SOUTH AFRICAN SEASONS.

Autumn commences ...	...	...	March 21
Winter commences ...	...	...	June 22
Spring Commences ...	...	...	September 24
Summer commences ...	...	...	December 22

### HOW MUCH SEED YOU WILL REQUIRE

One pound of Broad Beans or Runners gives a row of 50 to 60 feet.

One pound of Kidney Beans gives almost double that length of row.

One ounce of Cabbage seed covers 6 to 8 square yards and the same applies to Cauliflower, Savoys, etc. From that amount you get 5,000 plants or more.

An ounce of Celery gives an enormous number of plants, say 20,000 or more.

An ounce of Leeks covers 5 square yards and yields up to 8,000 plants.

An ounce of Mustard covers 1 square yard; of Cress, 3 square yards; of Radishes, 2 to 3 square yards.

An ounce of Lettuce covers 10 to 15 square yards.

An ounce of Beetroot gives a row 50 feet long; Carrots 80 feet; Onion 150 feet;

Parsnips 200 feet; Parsley 120 feet; Radishes 75 feet; Spinach 100 feet; and Turnips 120 feet.

### WHEN TO ORDER SEEDS.

#### FLOWERS

JULY AND AUGUST:

Order Annuals, for Summer flowers.

SEPTEMBER TO NOVEMBER:

Order ALL Perennials.

DECEMBER AND JANUARY:

Order Annuals, for Autumn flowers.

FEBRUARY AND MARCH:

Order Annuals, for Winter flowers.

APRIL:

Order Annuals, for Spring Flowers.

#### VEGETABLES

JULY TO OCTOBER:

Order Summer Vegetables.

JANUARY AND FEBRUARY:

Order Winter vegetables.

Rates of Postage. See Business Information.

Special Prices quoted for Large Quantities.

“FORD’S Seeds Grow”

## PEAS—ERTJIES

### HIDDEN HELPERS

When you are clearing away Peas and Beans, do not pull up the plants, but cut them off at the soil and leave the roots in the ground.

The roots of Peas and Beans are covered with little nodules, in which live millions of tiny bacteria all engaged in changing atmospheric nitrogen into plant foods.

Leave them there to carry on the good work. Your next crops will reap the benefit.

**5 lbs. or more will be supplied at the 10 lb. rate:**

### Seed Sowing

In 99 per cent. of the causes of failures experienced in raising Seed for the Home Garden, there is nothing at all wrong with the germinating power of the Seed, and the non-appearance of the plants is nearly always due to one of the following causes:—

1. Sowing Seed too deeply or not covering sufficiently.
2. Allowing the surface soil to become too dry-caked.
3. Omitting to provide some sort of covering during hot weather.
4. Sowing when the soil is too cold or too wet to permit germination.

— It Pays to Grow New, Clean, Reliable Seed —

**FORD'S Fertilizers Make Seeds Grow.** Full Fertilizer List—See Pages 40 and 41.

**LETTUCE—SLAAI****HOW TO GROW GOOD LETTUCE**

Make sowings of seed about once every two or three weeks—just a pinch of seed on the rule of "little and often." In the height of summer, or with dry weather, the seedlings do not transplant very easily, and moving causes them a bad shock. Therefore, sow the seed very thinly indeed. When large enough to handle, thin out the seedlings to stand some 9 inches apart, and just leave them. This is the way to get lettuces of fine quality quickly.

In the case of tall or "cos" lettuce particularly, you need to remember that they are very thirsty subjects, and require a great deal of water if they are to grow quickly. You must remember though, that when you use the watering can very freely, the surface of the ground becomes very hard, so that every now and then it will pay to loosen it up with the hoe. To grow really good, hearty lettuce of the cos variety, wait till it is about half developed, and then, fairly loosely, tie round a piece of bast, about two-thirds of the way up.

Lettuce—Webb's Wonderful.

## NITRATE OF SODA

Nitrate of Soda is the best Nitrogenous fertilizer for:—

Tobacco Seed Beds.	Maize.	Golf Links.
Tobacco Plants.	Grain Crops.	Lawns, etc.
Fruit Trees.	Vegetables.	
Flowers.	Bowling Greens.	

*Fertilize Freely*, or all your labours in the garden will be wasted. Plants must have Nitrogen, and the best form is Nitrate of Soda in conjunction with phosphates and potash.

Nitrate of Soda 2½ lb. Packets 1/6.

Ford's Boer Improved

## Some Reasons for Growing Cattle Pumpkins

1. A cheap, easily-grown, Winter fodder for Cattle, Pigs and Horses.
2. Of good feeding value and high palatability.
3. A short Season Summer crop, only occupying the land for four to five months.
4. Excellent as a Rotation crop for cleaning up weedy ground.
5. The pumpkins can be stored and used as required during the Winter and Early Spring.
6. A change of Fodder and a good addition to Chaff, Hay or Ensilage.

3rd Year.—Maize: unfertilized.

4th Year.—Teff: Sudan Grass; or Manna.

# WISCONSIN WHITE DENT SEED MAIZE

## NEW CROP

Our seed is very well known throughout the Union, Rhodesia, Portuguese East Africa, and South West Africa. It is gathered only from specially selected cobs. The demand for this seed increases yearly.

The advantages of this variety are:—

- (1) QUICK MATURING. (Can be planted up to the 15th December on the High Veld.)
- (2) HEAVY YIELDING.
- (3) A SMALL BUT HEAVY GRAIN, full machine bag of which weighs 240 lbs.
- (4) STOCK EAT ALL THE STALKS.
- (5) DROUGHT RESISTING.

**27/6 per bag 203 lbs. F.O.R. JOHANNESBURG.**

## LEGUMES

They gather nitrogen from the atmosphere without cost to the farmer and are often aptly referred to as "soil renovators." You cannot afford to overlook them.

**WRITE FOR PRICES** or see our advertisements in the "Farmer's Weekly" during Planting Season.

Farmers are rapidly awakening to the importance of growing some Legume or other. It is hardly necessary to define a Legume, but to those who are ignorant of its true definition, it might be described as a soil and animal improving crop.

A Legume, due to its capability of developing nodules containing nitrogen on its roots, improves the soil by adding that most important plant food to it. Several cases can be quoted where the inclusion of a Legume in a cropping system has resulted in a higher yield of crops following.

One of the main faults of cattle feeding in South Africa is the general scarcity of protein rich feeds. Such a deficiency could be supplied by growing a Legume. There is little doubt that in most farm practices highest profits are possible by feeding mainly home-grown feeds.

### BACTERIA FOR SEED INOCULATION

Every farmer should use our Bacteria to treat all Legumes, lucerne, beans and peas. It is the cheapest and best fertilizer known. Gives better crops, increases their food value 10 to 50 per cent, and leaves some 50 to 100 lbs. of nitrogen in the soil. Used to grow humus it is the world's best fertilizer.

**7/6 per bottle sufficient for 25 lbs. of lucerne, or 60 lbs. of Peas, Beans or Cowpeas, and Vetches.**

### **MUNG BEAN**

**(Phaseolus Radiatus L.)**

#### **WHY YOU SHOULD PLANT THE MUNG BEAN**

1. It is erect in growth and consequently can be easily mown with ordinary mower and made into hay, or ploughed under as green manure; three difficult operations in connection with the Cow Pea because of the latter's decumbent growth.
2. It yields better than the Cow Pea.
3. It is less susceptible to disease.
4. The hay crop matures in 100 days.
5. The Bean crop matures in 135 days.
6. It is readily eaten by cattle.
7. It is very nutritious and does well as a Hay crop on dry lands.
8. It has a large yield.
9. It is simple to cultivate. Drill in rows three feet apart and about 12 lbs. seed per acre.
10. Being a legume, it increases the nitrogen content of the soil.
11. It is pre-eminently a crop to be used in maize rotation.
12. **PLANTING**—Lowveld, August to December.

Middleveld, October to mid. December.

Highveld, October to end November.

## SUNN HEMP

## A New Green Manuring Crop

*(Crotalaria juncea)*

It is a Leguminous fibre plant grown in certain parts as a green Manure Crop. SUNN HEMP is a Splendid Legume for Green Manuring, easily turned under.

It is specially suited to the Warmer Districts.

It takes the place of Cowpeas.

It stands drought well.

It makes good ensilage.

It is ready to plough in 3 or 4 months after planting.

Plant 20 lbs. per acre.

## Summer Rainfall Area

The area of summer rainfall may be divided as follows:—

**Sub-Tropical Belt.**—A sub-tropical region extending from the sea to roughly 1,500 feet above sea level.

**Lower Midlands.**—Hills and plains situated above 1,500 feet, including districts like Pietermaritzburg, Eshowe, Howick, and low lying river valleys in Natal, Zululand and Swaziland.

**Midlands.**—From 3,000 feet to 4,500 feet above sea level. Frequently misty, and experiencing occasional severe frosts.

**Highveld.**—From 4,500 feet upwards, including a large part of the Transvaal, the Orange Free State, and mountainous regions of Natal and Zululand. In every division, however, altitude is not so important as climate and temperature. These are the best guides.

Florida Roots ... ... ...	12/6	11/6
Waverley Grass ... ... ...	12/6	11/6

*Renovation of Lawns*

Lawns which have been badly laid down at first, or neglected afterwards, may be improved by sowing 20 to 30 lbs. of Lawn Seed per acre. Before sowing, the surface of the soil must be well stirred with a strong iron rake, and afterwards top-dressed with fine soil, if possible. If the land is poor, a top-dressing of Bone Meal is desirable. After top-dressing, roll the lawn, sow the seeds, rake them over with a fine rake, and afterwards roll well both ways.

PLEASE NOTE.—Special Prices for large quantities. Standard Mixture is suitable for Cane, Cotton, Vegetables, Flowers, Maize, Root Crops and Wheat.

Fertilizers are applied to the soil to increase its fertility and to put back the plant food taken from the soil by growing crops. Experiments only can decide what fertilizers should be applied, but the following are approximate quantities necessary:—

Fertilizers for	Grain and Maize .....	...	...	...	...	...	200-400 lbs. per Acre
"	Lucerne and Tobacco .....	...	...	...	...	...	600-700 "
"	Potatoes and Roots .....	...	...	...	...	...	500-700 "
"	Vegetables .....	...	...	...	...	...	600-800 "

The smaller quantities could be applied on fertile soils, or on farms where extensive crops are grown, and the larger quantities on less fertile soils or in the case of intensive farming.

## Sowing and Seeding Calendar FOR FARM SEEDS

The data given below must necessarily be regarded as approximate, especially in reference to times of planting, the periods specified merely indicating the latitude that can be taken subject to weather conditions or facilities for irrigation. Figures indicate rate of seeding in pounds per acre, except where otherwise stated (two and one-ninth acres equal one morgen); b stands for broadcast, d for drills.

**Artichokes (Jerusalem).**—Same as potatoes (d).

**Barley (Summer).**—All Provinces, November to December (80—100).

**Barley (Winter, Irrigated).**—Transvaal, O.F.S. and Natal, May to June (70—80); Cape Midlands, February to May (60—70); Western Province, May (40—50, b).

**Beans (Dwarf).**—All Provinces, August to February, according to last and first appearance of frost (10—50, according to variety), drills two feet apart.

**Beans (Runner).**—All Provinces, October to November for seed; to December if for ploughing in (20—30, d).

**Buckwheat.**—Cape Midlands, November to February; Transvaal, November to January; Natal, September to February; Western Province, September to January (30—50, b).

**Chicory (Summer).**—All Provinces, November to December (4—5, d).

**Chicory (Winter).**—All Provinces, February to April (3—4, d).

**Cotton.**—All Provinces, October to November (5—7, d).

**Cow-Peas.**—All Provinces, October to December, for seed; to January for ploughing in (30—50, b or d).

**Grasses.**—Kikuyu: All Provinces, during moist warm weather, cuttings set 3 ft. x 3 ft. apart. Paspalums: All Provinces, November to February (15—20, b). Sudan: All Provinces, October to January (20, b). Teff: All Provinces, October to February (6—10, b). January to February will be found the best months for sowing most grasses.

**Kaffir-Corn.**—All Provinces, September to middle of December (5—8, d).

**Linseed.**—All Provinces, October to March (20—30, b).

**Lucerne under Irrigation.**—Cape Midlands, September to October and January to April; other Provinces, February to April (15, d; 25, b).

**Maize.**—Late Varieties (Natal White Horsetooth, Natal Yellow Horsetooth, Ladysmith White, Hickory King, Potchefstroom Pearl, German Yellow): September to middle of December.

**SOWING AND SEEDING CALENDAR—(Continued)****MAIZE—(Continued)**

Medium Varieties (Iowa Silver Mine, Chester County, White Cango, Yellow Cango) : September to end December.

Early Varieties (Bread Mealies, Boesman) : November to middle of January (8—20, d), according to variety : for silage to end of January.

**Mangels.**—All Provinces, October to December (5—8, d).

**Manna and Millet.**—All Provinces, October to December (12—20, b).

**Melons.**—All Provinces, October to December (2—4).

**Oats (Summer).**—Cape Midlands, November to January ; other Provinces, August to November (70—80, b).

**Oats (Winter).**—Western Province, April to June ; other parts, February to March (50—100, b).

**Oats (under Irrigation).**—Cape Midlands, March to July ; other Provinces, March to April.

**Onions (Main Crop).**—Transvaal, August to February ; Western Province, March to June ; Natal, April to May (4—6, d).

**Peanuts (Monkeynuts).**—All Provinces, October to middle of December (15, shelled ; 40, unshelled, d).

**Peas (Main Crop).**—Cape Midlands, May to July ; other Provinces, February to April (60—100, d).

**Potatoes (Early).**—Transvaal and O.F.S., August to September ; Cape Midlands, August to January ; Natal, June to August (6—10 bags, according to size, d).

**Potatoes (Main Crop).**—Transvaal and O.F.S., December to January ; Cape Midlands, September to November ; Natal, September to December (6—10 bags, according to size, d).

**Pumpkins.**—Cape Midlands, September to December ; other Provinces, October to December (2—5).

**Rape (Winter).**—Transvaal, February to April ; Cape Midlands, January to March ; Natal, January to February ; Western Province, March to May (2, d ; 8, b).

**Rye (Winter).**—Cape Midlands, February to April ; Western Province, May to June ; Transvaal and other Provinces, February to April (50—60, b).

**Sunflower.**—Western Province, September to December ; other Provinces, October to December (7—10, d).

## FLOWER SEEDS

### WHEN TO ORDER

JULY and AUGUST ... ... ... ...	Order Annuals, for Summer Flowers
SEPTEMBER to NOVEMBER ...	Order all Perennials
DECEMBER and JANUARY .. ...	Order Annuals for Autumn Flowers
FEBRUARY and MARCH ... ...	Order Annuals, for Winter Flowers
APRIL ... ... ... ...	Order Annuals, for Spring Flowers

The Raising of Flowers from Seed in South Africa presents considerable difficulty to those who have not studied the problem, but is quite easy when once the few underlying principles have been grasped.

*Keep Seeds Moist.*—It is imperative to remember that Seeds must never be allowed to become dry, once they have been planted.

*Shading is Necessary.*—It is impossible in practice to keep seeds moist if they are exposed to our fierce sun. Shading is, therefore, necessary. In any case seeds germinate better in the shade.

*Light is Essential.*—Once the seedlings come through the ground, it is absolutely essential they should get as much light as possible, as otherwise they will become weak and stalky and will never make strong, sturdy plants. The direct rays of the sun only should, therefore be excluded.

Provided the foregoing 3 Essentials are carefully attended to, success is assured.

### HOW CAN YOU EXPECT BEAUTIFUL FLOWERS

If you do not give them a Square  
Meal.

Use Nitrate of Soda.

2½ lbs. for ... ... ... ...	1/6
5 lbs. for ... ... ... ...	2/6
10 lbs. for ... ... ... ...	3/6
25 lbs. for ... ... ... ...	5/6

OUR FERTILIZERS MAKE SEEDS  
GROW.

"SEEDS THAT GROW"

## SWEET PEAS

It will soon be time for sowing this glorious flower for winter use. It is not yet widely known that there are two distinct classes of sweet peas, one, the ordinary summer flowering variety, the other the early flowering or winter sweet pea. This later variety should be sown in February or March, and will begin to bloom in May and June and continue to flower throughout the winter. It grows and flowers well in almost any district in South Africa.

### CULTIVATION.

Dig trenches 2 feet deep by 3 feet wide and work in plenty of cow manure, adding a good dressing of bone meal. The top six inches of soil should be without any manure whatsoever. Sow the seed about one inch deep and six inches apart, and water thoroughly. When the plants are 12 to 15 inches high cut back to 9 inches in order to stimulate the laterals, and thin out to one foot apart. Train and tie up to wire netting, and keep all side shoots cut off. Apply liquid manure as soon as the blooms appear, and continue using weekly throughout the season. Sweet Peas, to be grown successfully must have an unlimited supply of water.

### Winter Flowering

#### NEW NOVELTIES. Prices are Post Paid.
